### Granor joints go in on Peninsula Link

**The Peninsula Link project is a 27 kilometre road link under construction in South East Melbourne. The \$759 million project includes 35 bridges with Granor supplying all of the bridge deck expansion joints.**

The first of the joints are now going in, including Granor Etic® EJ110 aluminium saw-tooth expansion joints recently installed into the Robinsons Road Bridge. In total Granor will be supplying approx 400 metres of expansion joints, including more aluminium saw-tooth, steel finger joints, as well as Granor "AC-AR" aluminium strip seal joints.

**Robinsons Rd Bridge over Peninsula Link, Melbourne**

Granor Etic® EJ110 aluminium saw-tooth joint being installed into block-out. Teeth are offset slightly in transverse direction to allow for skewed line of movement.

The installer preferred to preassemble joint adjacent to expansion gap and then lift into position with use of strong-backs. (Alternatively the joints can be assembled in situ.)
